TITLE : PHOTORENSOR HAVING CONTG.
REACTIVE AROMATIC AMINE IN HOLE
TRANSPORT LAYER AND
MANUFACTURE THEREOF

ABSTRACT : PROBLEM TO BE SOLVED: To suppress deterioration in photoelectric conversion characteristics by providing a hole transport layer contg. a compd. derived from an aromatic amine having at least two monovalent groups reactive with themselves and/or other compd.

SOLUTION: Aromatic amine having at least two monovalent groups reactive with themselves and/or other compd. is expressed by a general formula wherein Z₁-Z₉ are each H atom, 1C-4C alkyl group, monovalent group reactive with itself and/or other compd. and at least two of Z₁-Z₉ are each a monovalent group reactive with itself and/or other compd. and pref. a monovalent group contg. an ethylenic unsat. group and/or epoxy group, esp., pref. acryloyl group, metacryloyl group, etc., if Z₁-Z₉ are ethylenic unsat. groups. Using this compd., the deterioration of the photoelectric conversion characteristic can be suppressed.
